***Claim Rejections under 35 U.S.C. 103(a)***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1,2,4,11,14-22,27,29,30,32-34,39,40 are rejected under 35 U.S.C. 103(a) as being unpatentable over Daoudal (FR 2693738; 1/21/94) and JP 50082105; 7/3/75. Daoudal teaches an aqueous dishwashing solution comprising 1-15 wt. % ethoxylated fatty alcohol (hydrophilic solvent), 10-30 wt % dimethylaurylamine oxide, and 5-15 wt % nonionic surfactant and 10-30 wt % anionic surfactant (enhancing component). See abstract. Daoudal does not teach or suggest the solution comprising ammonium chloride. However, JP '105 teaches a dishwashing liquid comprising 0.1-1.0 % ammonium chloride. See abstract. It would have been obvious to one having ordinary skill in the art to modify the composition of Daoudal to include ammonium chloride. One would have been expected to do this because both prior art liquid compositions are used to clean dishes. In a claim to a composition, a statement to the compositions intended use has no patentable significance.

3. Claims 1,2,4,11,15,16,18-20,22,27,29,30,32,39,40 are rejected under 35 U.S.C. 103(a) as being unpatentable over Saphakkul (US 4964874; 10/23/90 - on record) and JP 58023898; 2/12/83).

Saphakkul discloses a hair treatment composition comprising 0.1 to 5% fatty alcohol (lipophilic solvent) plus 0.1 to 5% 12-22C alkyl quat. ammonium chloride (cationic emulsifier). See column 2 lines 6-64. Saphakkul teaches the addition of dyes (enhancing compounds) to his composition. See column 2 line 66- column 4 line 4. Saphakkul also teaches the addition of ethanol (cosolvent) to his composition. See column 4 lines 16-27. Saphakkul teaches that the composition can exist at acidic pH of 2-6. See column 4 lines 30-33. Saphakkul does not teach the composition comprising ammonium chloride (lipophilic plant nutrient). However, JP '898 teaches a hair treatment composition comprising 0.7 to 7.0 % ammonium chloride, 0.1 to % % alcohol, 0.5-20 surfactant (enhancing compound) . See abstract. It would have been obvious to one having ordinary skill in the art to combine compositions. One would have been motivated to do this because both prior art compositions are individually taught to be used to treat hair.

***Claim Objection / Allowable Subject Matter***

Claims 3,5-10,12,13,23-26,28 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. Claims 35-38,41-45 are allowable. The prior art does not teach or suggest instant homogeneous liquid comprising mineral oil or fatty acid esters.
